It looks like they ran lab qc (ms/msd) on the sample and that accounts for the sheets that indicate the sample was spiked in the analyte type column. For sheets with target in the analyte type column, those would be our sample and duplicate samples.

Thanks [redacted]  
Why do they all have a “Spike” column?

Thank you  
Chris

Chris,

I’m not sure if you received the metals data from the lab, I’ve attached it to this email. I took a look at the prelim data and compared it against EPA RSLs for tapwater. Lead is not present above the RSL screening value for tapwater.
